

AST 102N — “Stars, Galaxies, and the Universe” — Summer 2021

Instructor: Dr. Michael Newberry
email: mnewberry@tocc.edu

Learn about the largest objects in the universe, including stars and galaxies. Discover the science and tools astronomers use to understand objects too distant to visit.

- This is an 8-week online course, running from May 24 through July 16.
- Mastering Astronomy and the Starry Night software are required. Both use the Web browser on your computer.

Note: A printed text book is optional, and the entire course can be completed using only a web browser and Internet connection. Skipping the textbook saves money, and the included browser version is identical to the printed book.
